

DATUMLEX BRAND AND PRODUCT DESIGN

Design Standards Guide

A practical reference for creating clear, trustworthy, and consistent legal intelligence experiences.

Design principles

DatumLex helps people interpret judicial information. The interface must make evidence easier to understand without overstating certainty.

Clarity before decoration

Prioritize hierarchy, plain language, and readable evidence. Visual effects must never compete with legal content.

Evidence over opinion

Show sources, filters, time ranges, and limitations so users can understand the basis of every indicator.

Calm confidence

Use restrained color, generous whitespace, and predictable interaction patterns to communicate trust.

Honest states

Never fabricate values. Empty, loading, error, and partial-data states must explain what is happening and what users can do.

PRODUCT PERSONALITY

- Professional, analytical, and accessible - never cold or intimidating.
- Objective and transparent - distinguish facts, classifications, estimates, and unavailable data.
- Contemporary legal technology - avoid ornamental courtroom cliches and excessive gold.

Logo system

Use the format that best fits the available space. Preserve proportions, whitespace, and the original colors.

MINIMAL MARK

HORIZONTAL WORDMARK

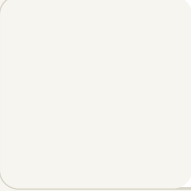

USAGE

- Use the minimal mark for avatars, app icons, compact headers, and square placements.
- Use the horizontal wordmark for covers, wide headers, presentations, and partner materials.
- Keep clear space around the mark equal to at least one quarter of the symbol width.
- Do not stretch, rotate, crop, recolor, outline, or add shadows and textures.
- Prefer white or deep navy backgrounds with enough contrast.
- Minimum digital width: 40 px for the minimal mark and 180 px for the horizontal wordmark.

Approval rule: use only the files listed in design/README.md. Do not recreate the logo from screenshots.

Color palette

The palette balances institutional trust, analytical clarity, and selective emphasis. Gold is an accent, not a default background.

	Deep Navy #0D2436 Primary text, navigation		Navy #14324D Buttons, headers, focus
	Teal #1F4E5F Secondary emphasis, G1		Legal Gold #C9A227 Highlights, G2, alerts
	Cream #F7F5EF Page background		Success Green #3F7452 Positive outcome, success
	Border #D9D5CA Dividers, card borders		Muted Text #5F6871 Supporting copy

COLOR RULES

- Use Deep Navy for body text on Cream or White. Use White text on Navy and Deep Navy.
- Do not rely on color alone. Pair status color with a label, icon, pattern, or value.
- Reserve Gold for meaningful emphasis and chart contrast; large gold areas reduce legibility.

Typography and spacing

A two-family system separates editorial legal context from functional interface content.

Georgia

Legal intelligence with editorial authority

Use for page titles, chart titles, and important editorial statements. Recommended fallbacks: Times New Roman, serif.

Inter

UI labels, paragraphs, filters, buttons, data, and tables

TYPE SCALE

Page title	40-52 px / 1.08	Georgia Bold
Section title	24-30 px / 1.2	Georgia Bold
Body	16-20 px / 1.45	Inter Regular
Label	12-13 px / 1.3	Inter Bold, uppercase
Metadata	12-14 px / 1.4	Inter Regular

LAYOUT RULES

- Use an 8 px spacing unit. Prefer 16, 24, 32, 40, and 48 px increments.
- Keep dashboard content centered with a maximum width near 1460 px and fluid side margins.
- Use whitespace to group information; do not add borders around every element.
- At widths below 1000 px, two-column charts become one column. At 760 px, filters and KPI cards also stack.

Interface patterns

Components must remain consistent across filters, indicators, charts, forms, and system feedback.

Filters

Place labels above controls. Show the active value. Disabled filters must remain readable and explain why they cannot change.

Primary actions

Use Navy fill and clear action verbs. Keep one dominant action per region and preserve a visible keyboard focus state.

KPI cards

Use a short label, large value, and a restrained accent line. Display '-' when a value is genuinely unavailable.

Information help

Use an information icon with an accessible label. Reveal methodology on click and allow explicit dismissal.

Data tables

Keep headers visible, align numbers consistently, support sorting, and preserve the active filters in exported context.

Feedback

State what happened, its impact, and the next action. Success must not conceal warnings or partial results.

REQUIRED SYSTEM STATES

Empty

Explain why no data exists and whether filters or integration affect it.

Loading

Preserve layout and announce progress without flashing content.

Error

Name the failure in plain language and provide a recovery action.

Partial

Identify which data is missing and avoid presenting totals as complete.

Design for responsible decisions

Legal analytics require context, traceability, and accessible presentation. Visual polish cannot replace evidence.

CHARTS AND INDICATORS

- Choose charts by question: bars for comparison, lines for trends, stacked bars for composition over time, and donuts only for simple part-to-whole views.
- Always show the metric, unit, time range, population, active filters, source, and last update date.
- Use Teal for G1 and Gold for G2. Use Green for favorable outcomes only when the meaning is explicit.
- Start quantitative axes at zero when comparing bar lengths. Avoid 3D charts, decorative perspective, and misleading area effects.
- Provide a text summary or accessible data table when a chart communicates essential information.

ACCESSIBILITY BASELINE

- Meet WCAG AA contrast: at least 4.5:1 for normal text and 3:1 for large text and essential controls.
- Support keyboard navigation, visible focus, semantic headings, accessible names, and logical reading order.
- Do not communicate status through color alone. Pair color with text, iconography, or pattern.
- Use plain Portuguese in the product interface and English in repository documentation, following team standards.
- Test responsive layouts at 320 px and with text zoomed to 200 percent.

REVIEW CHECKLIST

- | | |
|--|---|
| ☐ Correct official logo and palette | ☐ Clear hierarchy and readable text |
| ☐ Source and filters visible | ☐ Empty/loading/error states covered |
| ☐ Keyboard and contrast checked | ☐ Responsive behavior validated |

Governance: discuss material visual changes in a Pull Request and update this guide when the approved system changes.
